1 | Substitution Ciphers

A substitution cipher is one in which letters are represented by other letters; it can be deciphered by someone knowing the order of the cipher alphabet used.

One method of hiding messages in this way was invented by Julius Caesar, Roman Emperor over two thousand years ago. It is known as the Caesar cipher.

To encode a message, for example:

THIS CODE WAS INVENTED BY JULIUS CAESAR

take each letter, go three along the alphabet and use that letter instead (e.g. A goes to D).

Plain	A	B	C	D	E	F	G	H	I	J	K	L	M	N	O	P	Q	R	S	T	U	V	W	X	Y	Z
Cipher	**D**	**E**	**F**	**G**	**H**	**I**	**J**	**K**	**L**	**M**	**N**	**O**	**P**	**Q**	**R**	**S**	**T**	**U**	**V**	**W**	**X**	**Y**	**Z**	**A**	**B**	**C**

So the message becomes

WKLV FRGH ZDV LQYHQWHG EB MXOLXV FDHVDU

Exercise 1

What does the following message say?

JRQH WR ZDWFK KDUOHTXLQV. EDFN DW VHYHQ.

Note that you can shift by any amount, not just three.

Exercise 2

How many different ways of enciphering are there in this way (i.e. by how many different amounts can you shift your alphabet?).

On the next page is a table with the alphabet shifted by all possible amounts. This is sometimes known as a *Vigenere square*.
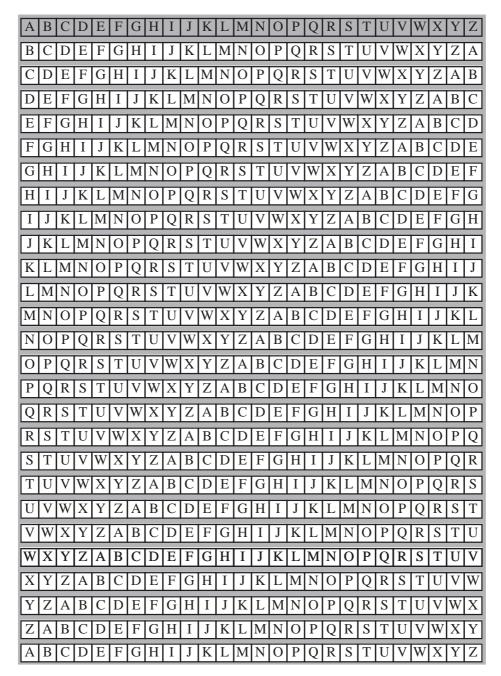

Exercise 3

The following message uses one of the shifted alphabets from the Vigenere square. What does it say?

BPQA PIA JMMV APQNBML JG MQOPB

Vigenere square

A	B	C	D	E	F	G	H	I	J	K	L	M	N	O	P	Q	R	S	T	U	V	W	X	Y	Z
B	C	D	E	F	G	H	I	J	K	L	M	N	O	P	Q	R	S	T	U	V	W	X	Y	Z	A

Going through all the possibilities one by one to see which makes sense is a tedious way of doing it! We can use the fact that in English, some letters occur more often than others. For instance, the most common letter in English is 'E'.

Exercise 4

Which letter occurs most often in the next coded message? What letter might this represent? How much of a shift is this? Can you use this fact to decode the message without trying every possibility?
